Education

- **Manipal Institute of Technology[MIT]** — Udupi, India
  Bachelor of Technology - Information Technology; CGPA: 7.1 — *2022 - 2026*
- **St. Joseph's Boys' High School** — Bengaluru, India
  Class XII (2022): 96% — Class X (2020): 92.3% — *2020 - 2022*

Skills Summary

- **Data Analysis & Modeling**: Python (Pandas, NumPy, Scikit-learn), Logistic Regression, Statistical Modeling, Data Cleaning
- **Visualization & Insights**: Matplotlib, Tableau, QGIS; skilled in creating dashboards and presentations
- **Research & Problem-Solving**: Business analytics, secondary research, data interpretation, hypothesis generation
- **Tools & Collaboration**: SQL, Git, Jupyter Notebook; experience in team-based projects and structured presentations
- **Web & Tech (Supplementary)**: HTML, CSS, JavaScript, ReactJS, MongoDB

Experience and Extracurricular

- **Full-Stack Software Engineer (ICICI Bank)** **(Jul 2026 – Present)**:
  Developing and maintaining enterprise-grade full-stack banking applications used across ICICI Bank.
  – Building and enhancing **Java-based full-stack applications**, contributing to backend services, business logic, and frontend features for internal banking platforms
  – Participating in feature development, bug fixing, and application maintenance to improve performance, reliability, and user experience across ICICI Bank applications
- **ML Intern (Bajaj Finserv) (May 2025 - July 2025)**:
  Contributed to credit risk analytics by developing predictive models and generating insights for loan default risk.
  – Built a **Logistic Regression model** to estimate **Probability of Default (PD)** for home loans within the Basel II framework, achieving an **ROC-AUC of 0.86** and a **KS statistic of 4.22**
  – Conducted comprehensive **model validation** (ROC-AUC, KS, calibration), ensuring alignment with **regulatory and business standards**
  – Translated findings into clear recommendations, enabling credit risk teams to enhance loan approval decision-making
- **IT Intern (Crimson Energy) (May 2024 - June 2024)**:
  Supported operational and logistics decisions through data analysis and visualization.
  – Analyzed large-scale **shipping and geological datasets** using **SQL** and **QGIS**, improving reporting accuracy and efficiency
  – Delivered analytical dashboards and insights to management, enhancing logistics decision-making

Projects

- **Liver Disease Prediction Model**:
  Built predictive models using clinical records to estimate liver cirrhosis risk and deliver interpretable insights.
  – Implemented **logistic regression and ensemble ML algorithms**, validating results with **Accuracy, F1-score, ROC-AUC**, and calibration plots
  – Applied **SHAP** and **LIME** to explain feature importance, making results accessible to non-technical stakeholders
  – Conducted **data preprocessing and feature engineering**, ensuring robust predictions
- **Real-Time Chat Application**:
  Developed a full-stack real-time messaging platform with secure authentication and instant communication.
  – Built a scalable chat application using **React, Socket.IO, Node.js, and Supabase**, enabling low-latency real-time messaging between users
  – Implemented **user authentication, account creation, and user search by unique ID**, providing secure access and seamless user discovery
  – Deployed the application on **Render** with a responsive web interface, delivering reliable real-time communication across devices
- **Mechanistically Guided Molecular Toxicity Prediction**:
  Research project on interpretable AI for computational toxicology using the Tox21 dataset.
  – Developed a hybrid transformer model integrating **SMILES embeddings**, **Morgan fingerprints**, **SMARTS-derived toxicophores**, and **molecular descriptors** for multi-label toxicity prediction
  – Implemented a literature-curated toxicophore detection framework using **RDKit SMARTS**, enabling mechanistic identification of toxicity-associated molecular substructures
  – Designed an interactive **Streamlit** web application that accepts **SMILES strings or drug names**, predicts toxicity across **12 Tox21 endpoints**, visualizes detected toxicophores and functional groups, displays molecular properties, and provides feature-based explanations for each prediction

Certifications

- Machine Learning Specialization (Coursera)
- Deep Learning Specialization (Coursera)
